A HUNTING BLIND **DESIGNED FOR THE MOST DEDICATED HUNTERS!**

- Excellent scent containment
- Fiberglass Roof
- Hinged Windows
- Fully Insulated

2023

BOTTOM ENTRY BLINDS

Our bottom entry blinds were designed with food plots in mind. They are designed to sit on the edge of a food or field edge, and be wrapped in camo netting to conceal entry onto the blind.

In addition to camo wrap, food plot screening is also an option to further conceal the bottom of the blind.

BOTTOM ENTRY DOOR

The bottom entry door is on the underside of the blind and measures 24" x 30". It is hinged on the inside and has a pull on the inside. No exterior handle is needed, just simply push up and in.

HINGED WINDOW

The horizontal windows are hinged in swing windows that measure 36" wide x 16" high, they swing in and flip up and latch at the top, this allows the window to be up and out of the way while preparing to shoot.

These horizontal windows offer a sill height that is perfect for gun or crossbow, in addition, when the windows are in the closed position, they are scent tight, thanks to the exterior weatherstrip and interior window clips.

VERTICAL WINDOW

The vertical windows are hinged in swing windows, measure 12" wide x 42" high, they swing in and to the side, these windows are located in each corner of the blind and are the perfect height for compound bow hunters. They are also scent tight with weather stripping and window clips.

BLIND BUGGIES

Our Blind Buggies were designed for hunters that hunt over farmland or large tracts of land with food plots. The concept is to relocate the blind as needed to accommodate changing winds and seasons.

The Blind Buggy is an excellent way to test a new area before committing to a permanent blind or stand.

The Blind Buggies also come equipped with four jacks for leveling, and a toolbox for storing the jacks or misc. tools.

CONSTRUCTION OF THE BLIND

We use #1 Pressure Treated Floor Joists and 5/8" Plywood for the floor. The walls are 2" framing with LP SmartSide exterior. The interior features fully insulated and carpeted walls complete with a fully insulated fiberglass roof.

FULL DOOR BLIND [STANDARD DOOR]

Our full door blind is an excellent choice for hunters that want a full door blind that can be easily accessed without stooping or bending down, even while wearing a backpack and carrying a firearm or bow.

FULL DOOR

Full doors measure 24" wide x 72" high, and have a 12" x 16" hinged window. The full doors come with standard latch and key. The full doors also feature weather stripping around the door for a scent tight seal.

BLACK ARROW BLIND KITS

Our disassembled kits are a great choice for hunters that are looking to set up a blind in the deep woods with limited access. Our kits can be transported one piece at a time to the location. Our kits are packaged with the panels in the upright position so you can access specific panels as needed. All fasteners and instructions are provided, as well as an instructional YouTube video on our website, phone support is available as well.
